This report contains the
biological (including fishing)
and oceanographic data
collected in the central North
Pacific during the July-
September 1958 period from
the U.S. Bureau of Commercial
Fisheries research vessel Hugh
M. Smith and the M/V Paragon.
The latter made a commercial-
scale gill-net survey for
albacore under a contract with
the Bureau. Scientists and crew
aboard the former collected
oceanographic, biological, and
fishing data to permit a
comparison of conditions in

1958 with those of previous years. The major effort of both

vessels was in the area between 155° and 175° W.

longitude and from 41° to 48°N. latitude.
